PROJECTS

NFT PROJECT

Role: HTML and development

Framework: HTML, SCSS, React js

Project is a game that combines the world of NFTs and that of Soccer. Project is the dream of every person who wishes to turn their hobby into insurmountable success, the only limit is how far they dare to dream. Members of the Project community, often referred to as users, get to undergo the full experience of managing a premier league club. Users can add NFT players to their squad, which allows them to earn points and climb up leaderboards, as well as receive native tokens - which are considered the sole currency for all transactions in the game. Whitelisted community members will have the ability to mint player packs. Each pack consists of 15 players, whose identity will not be revealed until 4 days later. Players can be sold before or after the reveal in the transfer market, or they can be kept and added to personal squads so that Users can use them when playing.

Online Order Food PROJECT

Role: HTML and development

Framework: HTML, SCSS, Next js

Join the world of smart technologies & take the leap with Project! A multitude of apps for your day-to-day delivery, logistics & mobility services crafted to fill the gap in today's market. Project offers delivery, mobility & logistics technology solutions for a variety of stakeholders within the market.
