FINAL YEAR PROJECT (B.Tech) : -

Project Name: Kinetic Energy Recover System on Bicycle

It is a system for recovering the moving vehicles kinetic energy under braking and also to convert the usual loss in kinetic energy into gain in kinetic energy.

- This system puts in use the energy which is lost in braking to increase the kinetic energy of the bicycle thereby can also help him to get to a destination faster while expanding same energy from his body
- This can be useful for people who lack energy or the people who are old.

CDAC PROJECT: -**Title: Online Cylinder Booking and Delivery System****Technology: MySQL, J2EE (Spring Boot), React JS**

Description: LPG Cylinder is used for cooking purpose at domestic as well as commercial places. The need for it is constant. Our application facilitates the customers to book the cylinder online and they can cancel it as well, if required. This application can also be used by distributors to check the status of booking and process them accordingly. Both distributors and customers can update their profile information very easily.
