- Add in, implemented SMS api like 2 Factor and Twilio APIs externally.
- Add in, implemented IVR api for Servetel in nodejs.

Hyperlink Infosystem, Ahmedabad, Gujarat

Jan'16 to Apr'21

Project Presented:

Sr. PHP- NodeJS Developer

- Basically app functionality is for real estate. Users can see property details and buy and sell it if they want.

- Application has chatting functionality so users can chat with direct buyers regarding property queries.
- At post time of property, User can select property attributes like living rooms, area per square, no. of bedrooms etc.
- Application has a guest user feature so you can directly see any post by just selecting the city or nearby area.

GateSmart App:

- There are two applications, 1. Resident App, 2. Guard App. Application feature is to manage data of entry and exit people in society. People have different categories like guest, external services, cab services and others.
- Guards can check in-out guests for a particular flat. Flat has also contained multiple users.
- Guard sends a request to the resident and after accepting/rejecting the request guards will give permission to enter/deny that person to enter the society.
- Also applications have 1-1 chat and group chat feature, feed , and social media like feature and more.

WhatsDeGo App:

- This app feature like social media and concept is based on Tinder App,
- Build this app in **Node JS** and **MySQL** database.
- In NodeJs, I used Express and adopted some of the functionality of ES6.
- Also use request and response encryption/decryption in it to call API calling.

San3a App:

- This application is service providing app,
- There are two side of application **customer** and **supervisor**
- Customers can make orders and the nearby best suitable supervisor is showing and customers can also send a request to do a task.
- Build this app in **Node JS** and **MySQL** database.

Saamell App:

- This application is based on a bidding system and auction based.
- User can post their advertisement(Product) with selecting category, sub category and its different attributes.
- All Attributes data is managed from the backend (Database) side depending on category and sub category.
- Also in that application, filter options have different attributes of advertisement based on category and sub category selection.
- Build This app in **Node Js** and **MySQL** database.

Winner Circle App:

- This application is based on contractor redeem point. This application have 2 side which is contractor(user) and team app.
- This is an application by the Astral Company.
- The Contractors scan QR code and redeem products after they have done KYC.

- KYC is done by team application and team app also have different modules like event,meetup, redeem gift request, manage store details and product details.
- Build This app in **Node Js** and **MySQL** database.
- Also I used Azure services like Azure server and Azure BLOB storage facility.

Personal Information:

- **Name** : Jaimin Bharatbhai Vyas
- **Permanent Address** : Sector-2, H.No. 88, NR ADC Bank, Ranip road, Nirnaynagar,Ahmedabad-382481
- **Gender** : Male
- **Marital Status** : Married
- **Date of Birth** : 23rd July, 1994
- **Passport** : Yes
