➤ Cred - IT

Technologies:- React Js, React Native

Services Used:- React Js, PHP, React Native

Role:- React Js, React Native Developer

Team Size:-4

Overview

- Cred-IT is a personal finance app. Our mission is to help people utilize all the benefits of using credit cards without incurring high-interest charges and excessive debt.
- After doing some research, I found apps that could help me a budget or pay bills but they either wanted to issue me another line of credit or wanted access to my personal bank account. I didn't want that.

➤ DhaniQ

Technologies:- React Js

Services Used:- React Js, java

Role:- React Js Developer

Team Size:-3

Overview

- This all started with extensive market research talking to a wide spectrum of Brokerage firms, Realtor teams and Realtors representing both buyers and sellers.
- DhaniQ is working on a groundbreaking one of a kind Realtor and client-facing website which fills in the gap in this fragmented market

➤ My Cloud Care Clinic

Technologies:- React Js

Services Used:- React Js, java

Role:- React Js Developer

Team Size:-4

Overview

- Cloud care is a platform to connect doctors and patients virtually.
- Doctors can easily connect with patients and can do billing, send prescriptions and send a fax as well
- Patients/doctors need to create appointments from the website and can easily manage from the inbuilt calendar.
- Both can connect either via video call or voice call and during the meeting also can do chatting using the in-meeting chat option.
- One quick connect option is also provided, with this option you don't need to create an appointment in advance, you just need to click on See a doctor/patient, and whoever is the doctor/patient is in the queue at the first position will be connected in one call.

➤ Plats

Technologies:- React Js

Services Used:- React Js, java

Role:- React Js Developer

Team Size:-4

Overview

- Plats is an online food ordering website, where users can search for different hotels and the available food within the hotels, like zomato.
- On this website, users can see the list of hotels, can search for different hotels, can search for foods and details of food and hotel are given there once any is clicked.

➤ SL Jewellers

Technologies:- React Js

Services Used:- React Js, Node Js

Role:- React Js Developer, Project Manager

Team Size:-3

Overview

- SL Jewellery is an online platform where users can buy Gold, Silver, and Diamond jewelleries. This is similar to Amazon where user can see the listings, can like the product, can save the product to wishlist, and can also checkout the jewelleries.
- My main responsibility as a Project manager and Lead engineer was to discuss all the requirements with client and creating modules for the same, creating project structure, developing the modules and fixings any bugs.

➤ SSSLOAN

Technologies:- React Js

Services Used:- React Js, java

Role:- React Js Developer, Project Manager

Team Size:-3

Overview

- SSS is a Trading platform, here the users can book trading contracts, basically this website is trying to make the user experience very easy so that users can easily book single or multiple contracts together.
- On this website, users can see the list of hotels, can search for different hotels, can search for foods and details of food and hotel are given there once any is clicked.

Features:

1. Single Trade Entry:

- Users will have a form to fillup the trading contract data, along with some prepopulated data from loanet.

2. Bulk Trade Entry:

- Users will have an option to upload an excel file with data in some predefined format (A sample template is already given in website for reference).
- Once user uploads the excel file, those data will be shown into a well formatted grid, and user can edit data within the grid, and after final editing user can submit the data.
- Users can submit the data
- Users can delete the data (by selecting checkbox in a row)
- Users will also be able to see the contract status like: Sent to loanet, Booked, Failed
- All the data uploaded by the users will be saved in db, so that if user is leaving the website after uploading the data, still user will be able to get those data back, we are persisting it, so user don't need to upload again and edit all the stuffs again.
- This website is also maintaining separate page for all the booked records with multiple filters to search records easily
- Also all the grids are moveable, you can set the grid wherever you want

➤ Realst

Technologies:- NextJs

Services Used:- NextJs, Node Js

Role:- Next Js Developer

Team Size:-4

Overview

- This is a platform where users can buy, rent and sell properties.

This website includes variety of features like:

- Sellers can list the property, can set open slots for users to visit the property, users can see the listings, users can make an offer to buy property, Sellers can see the offers made on their properties and can accept it reject based on their budget criteria.
- One of the amazing things of this website is that it provides variety of filters to see the listings that suits to your requirement. For example, you can search it by location (Country, State, City), you can search it by price, can search it by no of rooms available, can search it by type of property, can search it by radius of location using map, where you can move in the map and can filter based on the selected area in the map.
- Sellers can also add properties and can save it as draft and later on can edit and finally list them, so then after those properties will be visible to the buyers.
- This platform makes the buying, selling and renting properties process seamless and gives awesome user experience.
