PROJECTS

Shopping Cart

Single page e-
commerce
website.

(January 03, 2023 -
January 09, 2023)

- One web page which is having responsive properties.
- User can see multiple products in page along with their photos, rate and description. User can filter out the product depending upon the requirement. User also can add the specific product to their shopping cart.
- Technologies used : ReactJS, JavaScript, HTML5 and CSS3.

Form validation

Log in page
validation

(July 05, 2021 - July 19,
2021)

In this project I created one form pop-up, where I get information from user like username, Email and password. The username can contain any value. But Email should be in the correct format so I added validation to check data provided by user is in correct format or not. at last I take input as password, and added validation like at least 6 characters should be present. also I will confirm the password again and checking if user is entering the same password or not.
