Language	React.Js, JavaScript, Typescript, ES6
Framework	Next.JS, Jest
Database	MySQL
IDE	Visual Studio Code
Tools	Git, Postman, Grorapid
Project management tools	JIRA
Web Development Technologies	HTML, CSS, Bootstrap, SCSS

#### Experience Summary:

Working in KC Overseas Pvt Ltd. as a Junior Software Engineer from Dec-2021 to till date.

#### Academic Qualifications:

Bachelor of Computer Science (CS) from Pydah Kaushik College of Engineering (Andhra Pradesh) in 2019

## Professional Experience:

### Project# 1: KC Main Website.

**Description:** - The KC Main Website consists of lot many pages which will help students to aspire to their dreams to study abroad. Here we have used the React components for the greater look, we have used routers for path calling, for styling we used the SCSS module for it, and the NEXT.JS framework lot many. In the KC main website project, I worked on many of the Dynamic pages.

**Link:** <https://www.studies-overseas.com/>

### Project# 2: Elan Loans.

**Description:** The Elan Loans website is used for providing Loans for students who are aspiring to move to abroad for pursuing their masters in their dream university. Here we use react components for a better look, NEXT.JS framework lot many. In the KC Elan Loans project, I worked on many of the Dynamic pages and for responsive we used bootstrap and SCSS.

## Responsibilities:

- Involvement in requirement analysis and preparing technical design documents.
- Involved in the development of Front-end using ReactJS and Next.JS.
- Involved in issue resolution by interacting with QA.
- Functional testing and Bug Fixing.
- Worked to sowbugs issues from the JIRA.
- Worked on Front-end logic Implementations.
- Worked on debugging the code on production issues and Unit testing.

### Project# 3: Submit Form.

**Description:** Determine the fields that need to be collected in the form, such as name, email, phone number, address, education, etc. We are using Node.js, Express.js, and dependencies. Using HTML and CSS have created a form that collects the required information. It includes all the necessary fields and by using yup validation to ensure that the data entered is valid. For Database I used MySQL for creating a table to store the data from form, with columns that correspond to the fields in form. Used yup to define validation rules for the fields in the form. Created a function to handle form submissions, which will validate the data, insert it into the database, and redirect the user to a thank-you page.

### Project# 4: Student Public Profile.

**Description:** This project is related to a student login page in which the students will get the link after registering into the Course-finder. This link will remain 12 hours, Login page in which the students and partners both will get the OTP to their respective mail Ids and after the login you can enter into the dashboard page. student profile, Documents and applications. There in the profile section there are several fields where the student can fill in their personal information, work experience, academic qualifications, and the details of the test where they can fill the tests score details can add the documents and applications where a student can add all the details for the further proceedings here...
