PROJECTS

vCargo Application

- The technology I use to build this project is React.js, Ant Design and TypeScript. I use Functional Component and React Google map to show vehicles location on map.

Shopy E-Commerce Application

- The technology I use to build this project is React.js, Redux, Node.js, Express. I use redux for state managing. React.js is used to build UI of my project.
- I also use CORS to connect my backend and front-end application which are running on a different port. It helps in communication between these applications.
- link - <https://steady-gecko-4af793.netlify.app/>

Chat Application

- The technology I use to build this project is React.js, Node.js, Express and socket.io. Socket.io simply helps to create a room where all user connected to that room and then chat.
- link - <https://cerulean-mooncake-6f6f25.netlify.app/>

React Blog Application

- The technology I use to build this project is React.js, React-Router. I've created multiple components which are smart and dummy components.
- I use different State Variables for doing different manipulation in my application and handle all these by using the Hooks concept in Function Component.
