### 📁 PROJECTS

**Helix**, Online Job finder.

**Team:** 2 Developers

**Role:** Full Stack Developer

**Project Description:** We provide a platform for people who need to find a job online and apply. In this project there are 3 roles; first is the jobseeker(find and apply for a job), second is the employer(post job), and third is admin(approve jobs, jobseekers, and employer).

**Role:**

Worked on both the front end and back end of the application. Created APIs in NodeJS, ExpressJs, and MongoDB, and integrated those with the ReactJS frontend application. Responsible for managing the overall lifecycle of the project.

**Responsibilities:**

- Coordinate with team members.
- Full Stack development.
- Unit Testing.
- Regularly update code using git.

**Digit,** *Online buy, sell number plates.*

**Team:** 5 Developers

**Role:** Backend Developer

**Project Description:** We provide a platform to the people of Malaysia to buy, sell and bid number plates. The seller can post a number plate on the portal on the price he wish depending the plate number uniqueness. Buyer can buy the plates directly or can put the bid for the plates based on the option put in by the seller.

**Role:**

Drafting Technical specifications from the back-end's point of view & developing the same. Worked on Back-end development in NestJS(NodeJS Framework) and MongoDB database, and deployment of code using Docker.

**Responsibilities:**

- Coordinate with team members.
- Backend Development
- Unit Testing.
- Regularly update code using git.
- Deploying code using Docker

**SPL,** *E-commerce for industry use*

**Team:** 2 Developers

**Role:** Backend Developer

**Project Description:** We provide a platform to the people of Australia and India to buy industry product . The Admin can post product in bulk or single with price. User can buy the products.

**Role:**

Drafting Technical specifications from the back-end's point of view & developing the same. Worked on Back-end development in ExpressJs(NodeJS Framework) and MySQL database, and ORM is Prisma.

**Responsibilities:**

- Coordinate with team members.
- Backend Development
- Regularly update code using git.
